0/4 业务场景

客户端内Hybrid应用超50% 前端工程师100+人 业务逻辑与客户端严重耦合

Q: 手机界面白屏了....

Q: 真机加载速度不达预期....

Q: 用户反馈无法复现....

案例

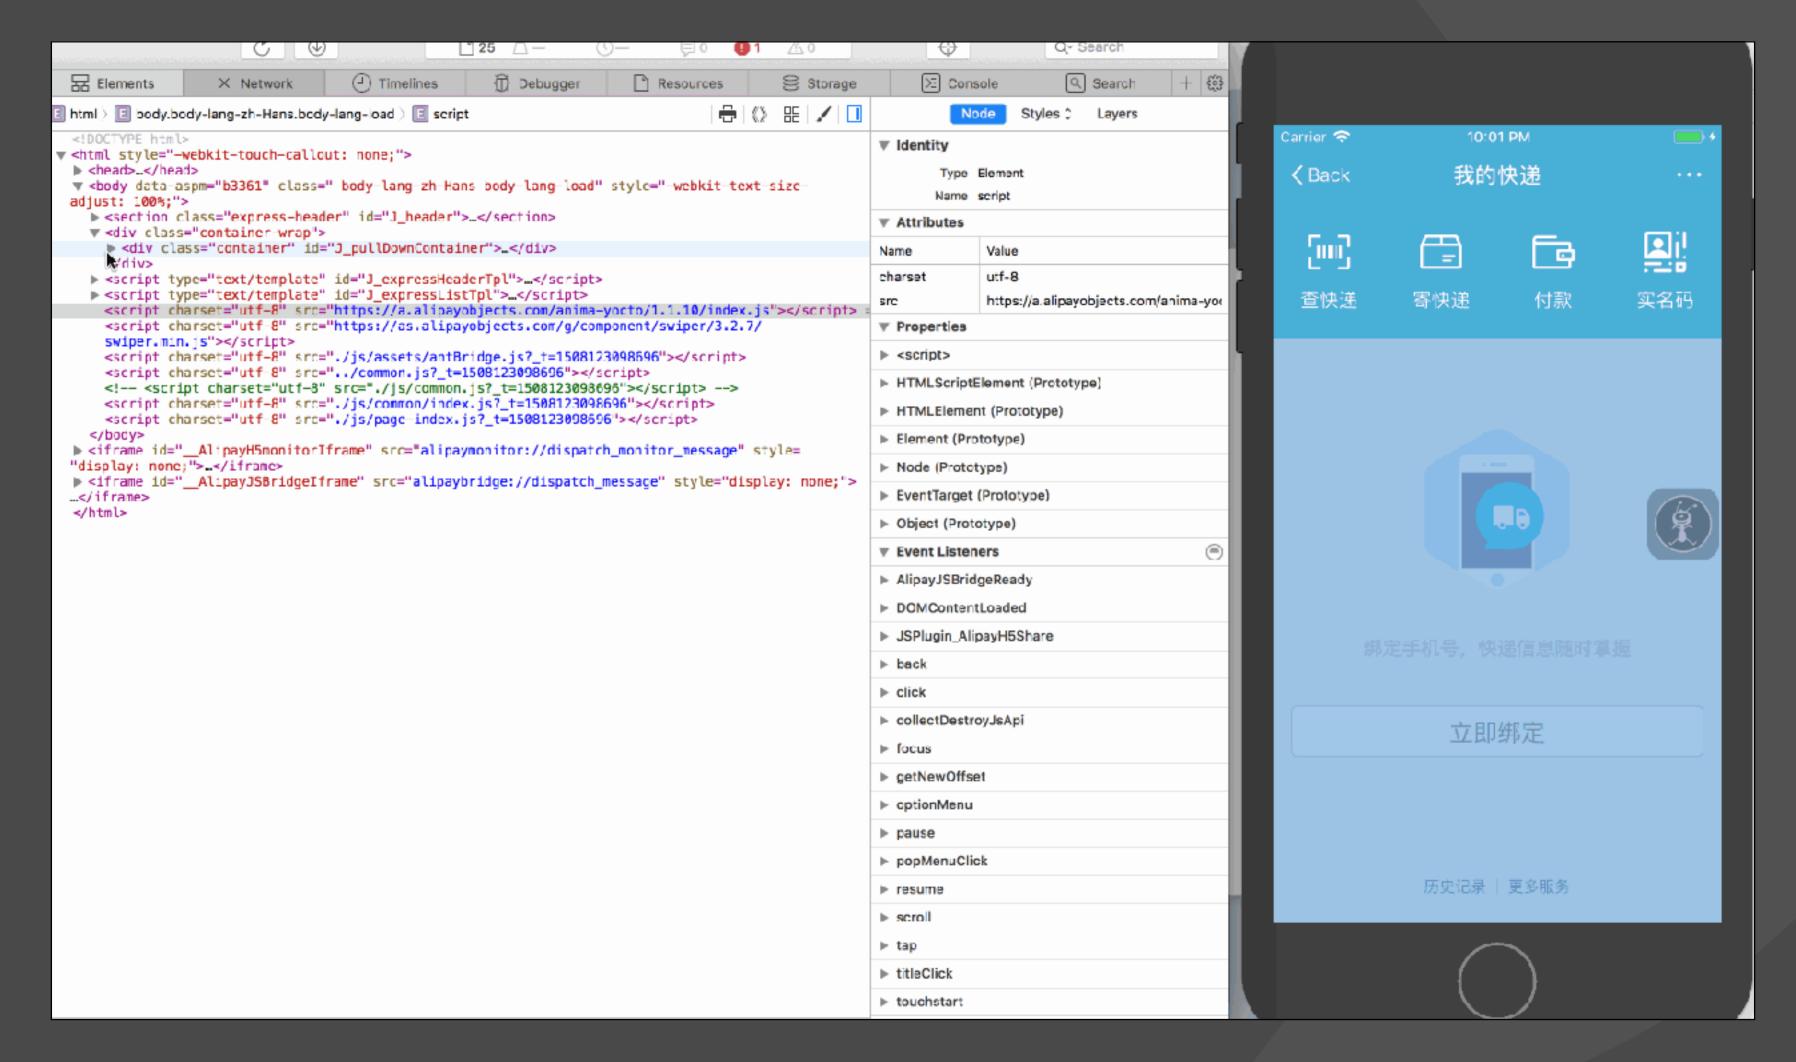

业务强耦合,分享建设理念

联动DNS,注册调试域名 去除Host绑定&&支持HTTPS

- * 团队需要信任公共的HTTPS根证书
- * 不妨备一个域名池,防止TTL过高造成的缓存

今// 搭建iOS模拟器环境

真实环境运行,拒绝在浏览器"模拟"

。 修改返回的状态码

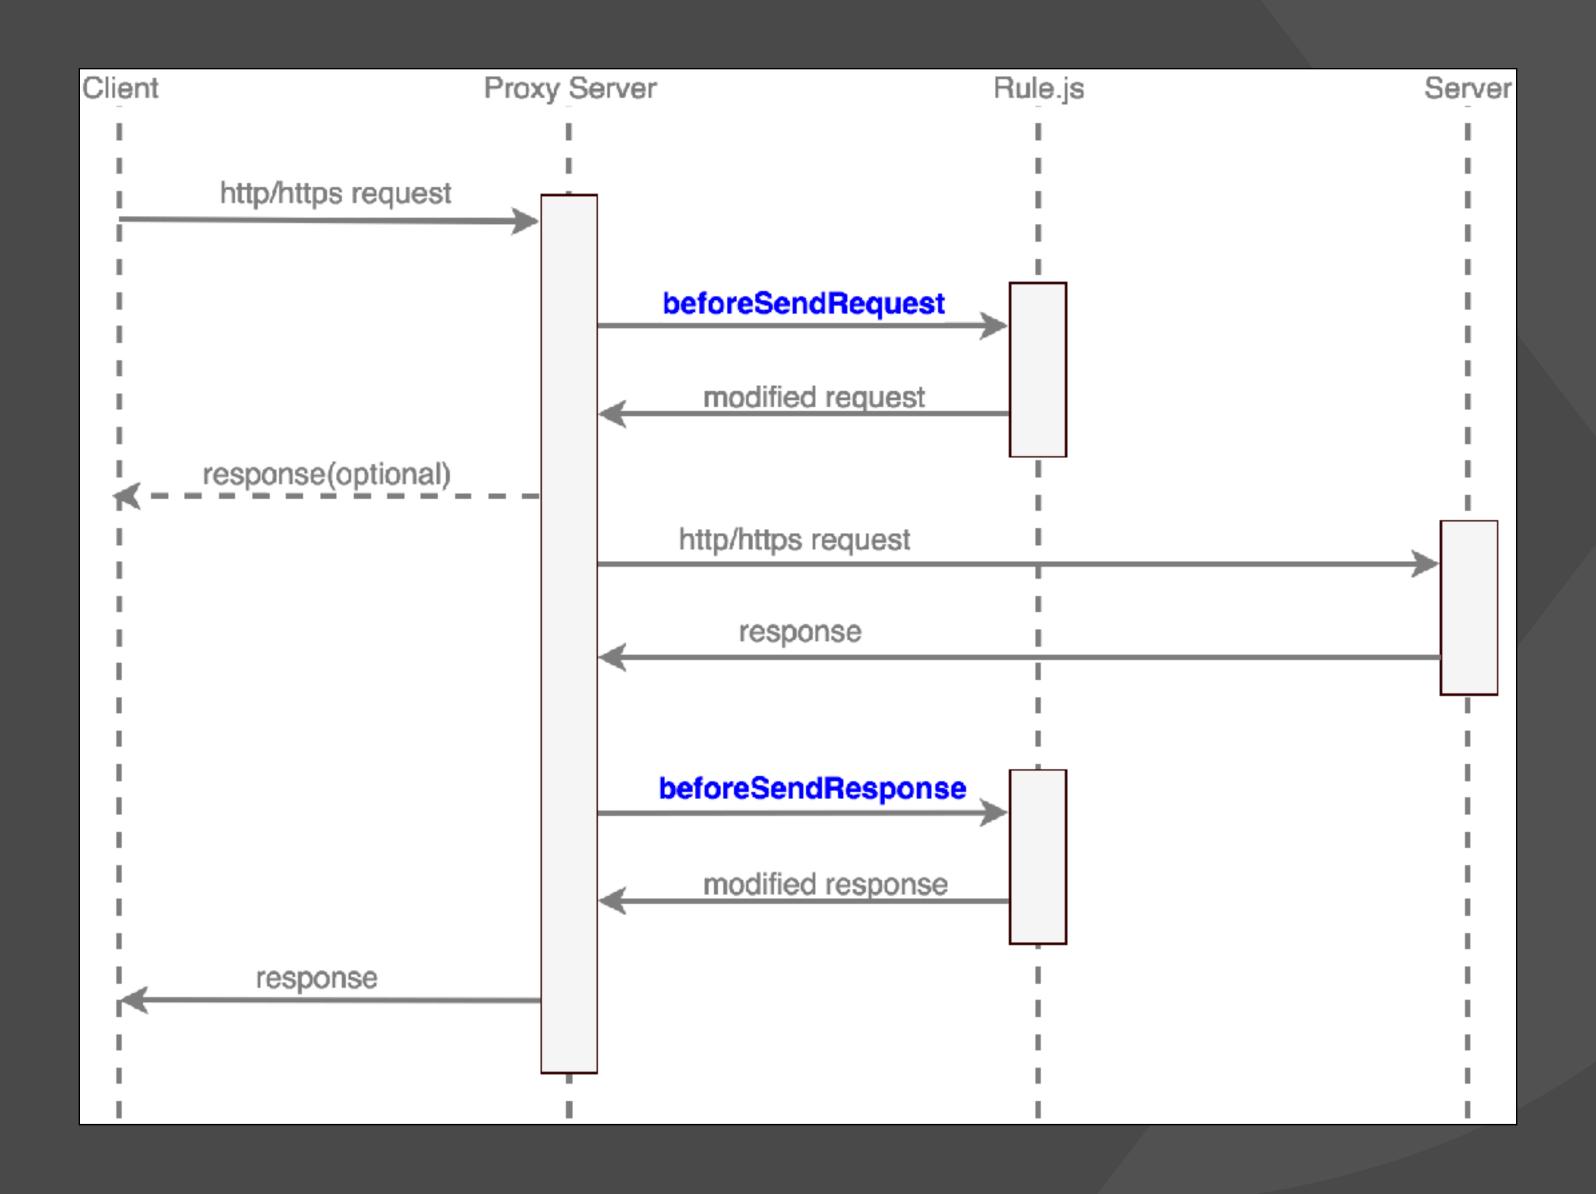

```
var newResponse = Object.assign({}, responseDetail.response);
newResponse.statusCode = 404;
return {
   response: newResponse
};
```

。 修改返回的内容

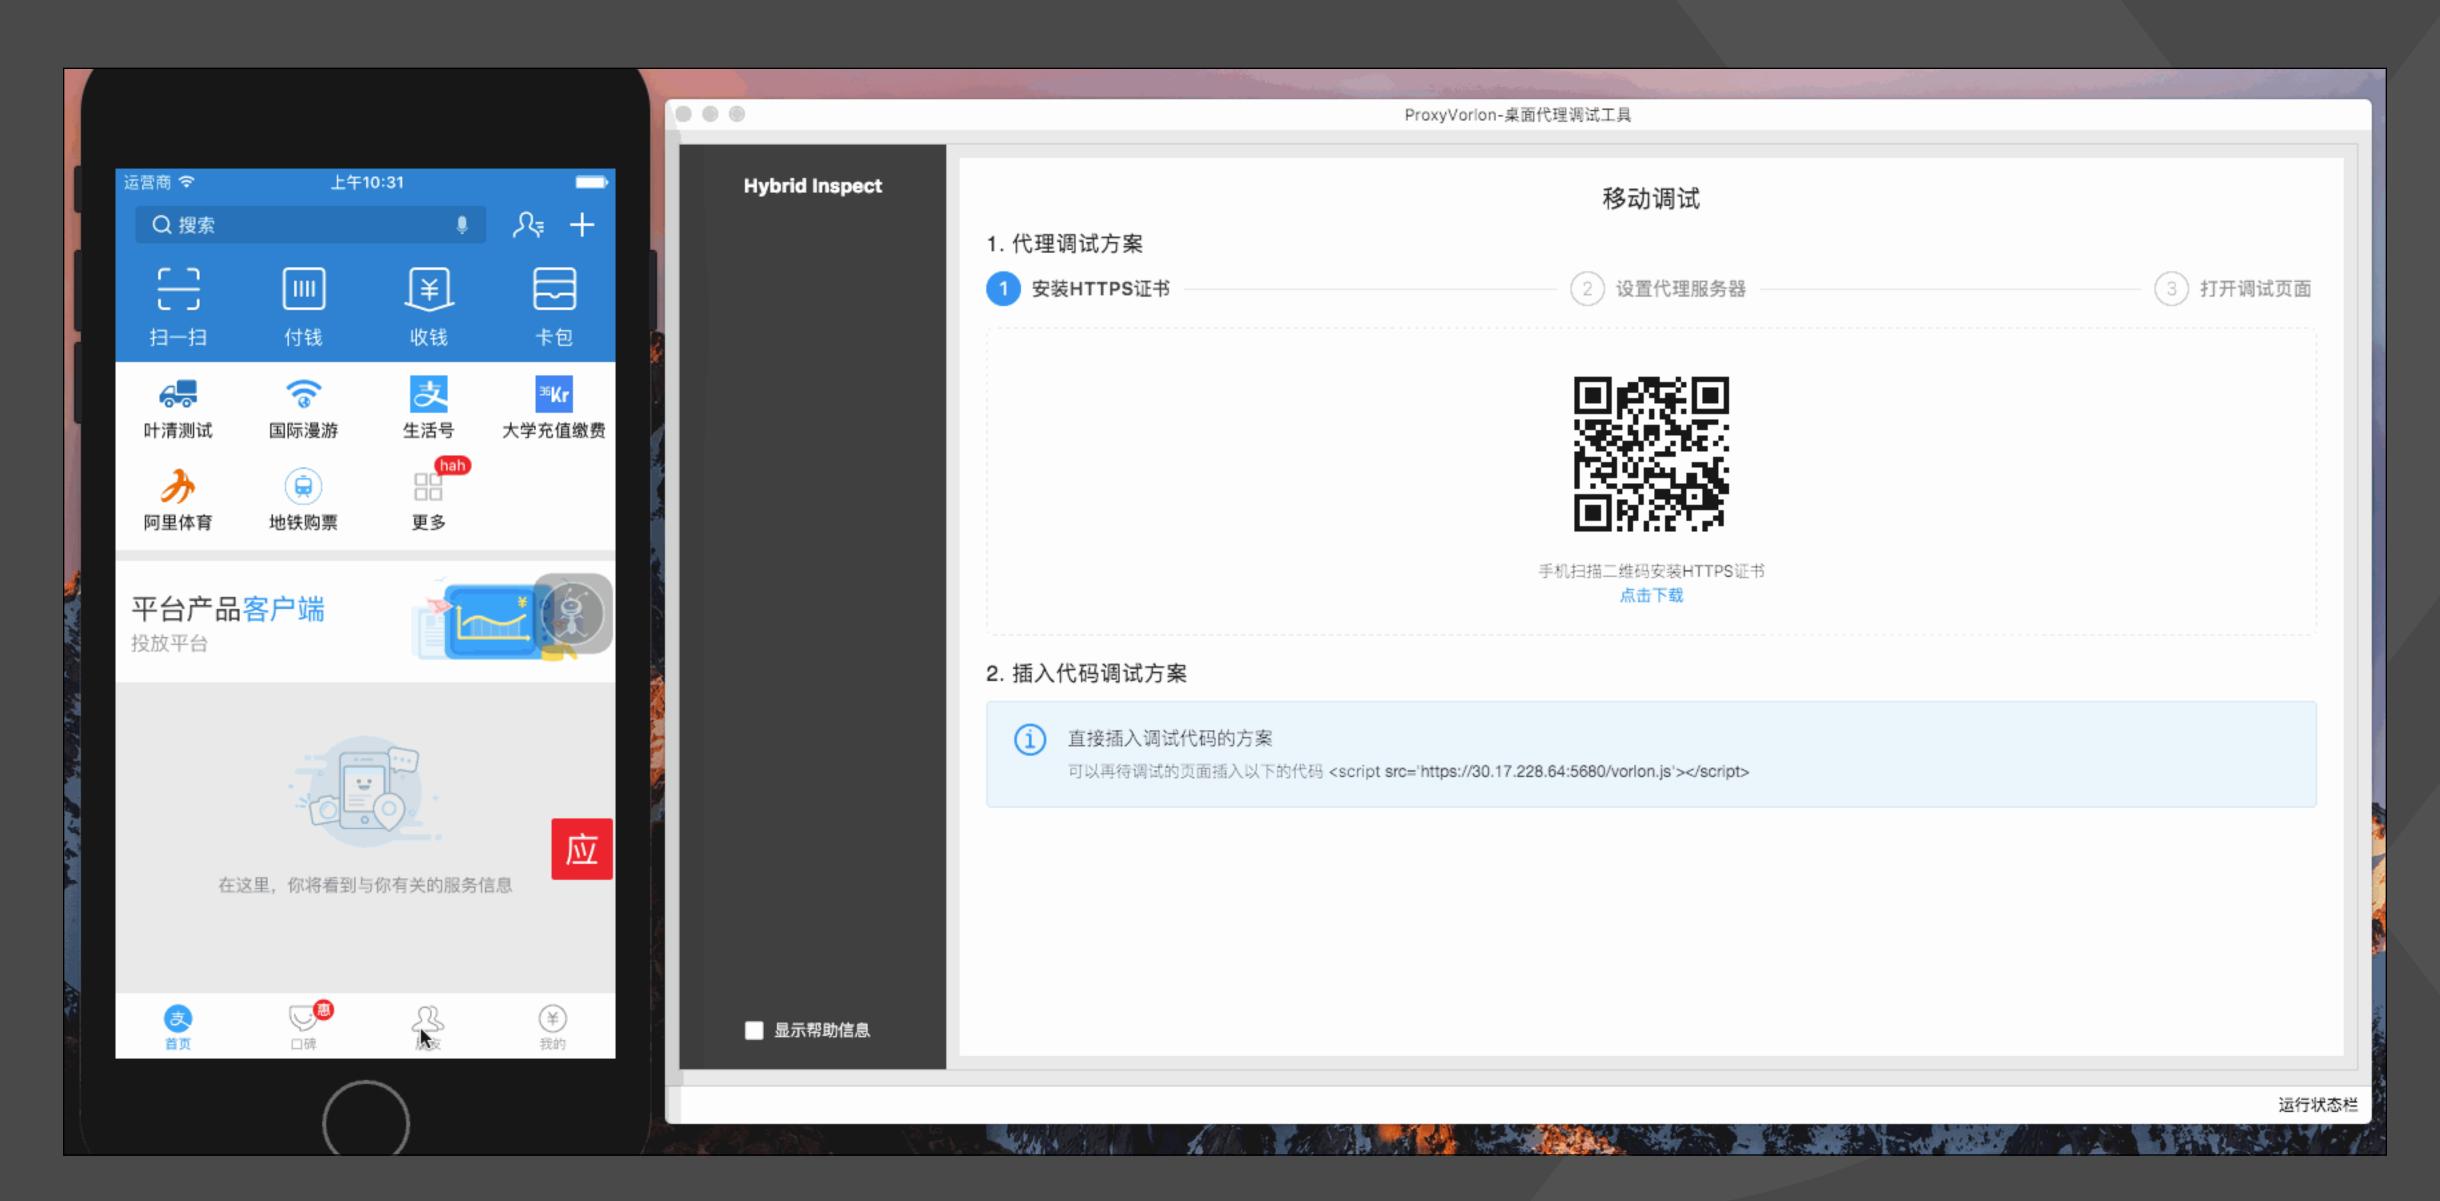

```
var newResponse = Object.assign({}, responseDetail.response);
newResponse.body += '--from anyproxy--';
return {
   response: newResponse
};
```

4/1 可扩展的代理服务器AnyProxy

Node.js中间件扩展业务逻辑

AnyProxy扩展案例-注入调试代码 https://github.com/bingjianguo/hybrid-inspect

AnyProxy扩展案例 注入 js 的核心代码

```
*beforeSendResponse(requestDetail, responseDetail) {
 const { response, url, _req } = responseDetail;
 const resType = getResType(response);
 // 1. 只处理HTML响应
 if ( resType == RESTYPE.html ) {
   let { body } = response;
   // 2. 注入调试client代码
   body = yield injectDebugJs({ body, url });
   response body = body;
 //(禁止浏览器缓存,对于服务端返回cache-control情况)
 const { header } = response;
 header['Cache-Control'] = 'no-cache';
 return Promise.resolve(responseDetail);
```
